PARICHEHR TALEBZADEH

PORTFOLIO LINKEDIN

PRODUCT DESIGNER

AMSTERDAM, NETHERLANDS, +31 657248971, INFO@PARICHEHR.DESIGN

AVAILABLE IMMEDIATELY · WORK PERMIT: VALID UNTIL 11/2027

SUMMARY

Product Designer with 5+ years designing complex B2B and SaaS products; ERP, supply-chain/logistics, and consumer platforms. I own problems end-to-end: running my own discovery and validation, building design practice and design systems from scratch, and making agile, opinionated calls for both novice and power users.

EXPERIENCE

Product Designer

DECEMBER 2023 – JULY 2025

ONTON · WEB3 EVENT PLATFORM ON TELEGRAM — *Remote (Finland)*

- As the sole designer, established the design practice and redesigned the core event-creation flow in ONTON's Telegram Mini App. Grew daily active users from 87 to 1,500+ over 20 months with no marketing.
- Cut event-creation time from ~7 minutes to ~1 minute (−86%) by restructuring a four-step, 20+ field flow into a guided two-step model — raising completion from 20% to 81% and repeat organizers from 2 in 5 to 4 in 5, validated through usability testing and live analytics.
- Designed campaign landing pages, the game interface, animations, and illustrations for the launch of ONION, ONTON's native token on the TON blockchain.

UI/UX Designer

MAY 2021 – SEPTEMBER 2022

CONNECT2WOW · ENTERPRISE ERP FOR CANADA'S OIL & GAS INDUSTRY — *Remote (Canada)*

- Designed an enterprise ERP unifying HR, safety (HSE), training, and field engineering into one product across six user types — from head-office HR to crews on remote sites — restructuring the information architecture from seven top-level areas down to four validated modules.
- As one of three product designers and co-owner of the design system, built a 40–50 component library (65 sets including icons) from the bottom up with Atomic Design, so three designers shipped one consistent product and engineers could build straight from it.
- Designed a six-type notification model driven by priority, source, and status, replacing ad-hoc per-screen alerts with one consistent system across the product.

Product Designer

JULY 2023 – DECEMBER 2023

CHALLENQUIZ · REAL-TIME MULTIPLAYER QUIZ PLATFORM — *Remote (Finland)*

- As the sole designer, diagnosed a critical onboarding drop-off through think-aloud research: players mistook the pre-game waiting state for a frozen app and wouldn't engage. Redesigned the end-to-end flow, halving time-to-start (~127s → ~62s) and raising clean game completion from 60% to 100%.
- Rebuilt the in-game experience to put opponents and real-time standing back on screen, lifting post-game satisfaction from 1.6 to 4.0 out of 5 and growing monthly players who finished a game from 535 to 1,451 (+171%).

Product Designer

NOVEMBER 2022 – JUNE 2023

EZAMPART · AUTOMOTIVE SPARE-PART SUPPLY-CHAIN PLATFORM — *Tehran, Iran*

- Led field research in repair shops and warehouses, mapping the production-to-consumption journey across stakeholders. Translated real-world storage constraints and purchasing behaviors into the platform's ordering model — eliminating 3 unnecessary handoffs — across a 3-phase, 2-year plan.
- Unified distributed platforms (main website, product catalog, shopping experience, downstream requests, company news, media website, representatives, and profile) into one source platform — reducing user confusion, improving findability across services, and driving a 22% increase in direct sales from the website.

Product Designer — Freelance

SEPTEMBER 2025 – AUGUST 2026

NOMADIC · VISION-AI PLATFORM FOR AUTONOMOUS-VEHICLE VIDEO DATA — *Remote*

- Co-redesigned Nomadic's website and brand visual identity as one of two designers, over roughly four months.
- Rapidly produced animations and interactive prototypes using Claude and Figma AI to sharpen stakeholder presentations, leading to faster implementation and fewer revisions.

EDUCATION

Master of Interaction Design

SEPTEMBER 2025 – AUGUST 2026

AMSTERDAM UNIVERSITY OF APPLIED SCIENCES (HVA)

Amsterdam, Netherlands

- Working in multidisciplinary teams, I led and contributed across research, ideation, craft, and testing on two projects.

Bachelor of Industrial Design

SEPTEMBER 2017 – JANUARY 2022

ART UNIVERSITY OF ISFAHAN (AUI)

Isfahan, Iran

- Built a foundation in core design principles — form, function, and user-centered thinking — across both physical and digital products.

SKILLS

- **Leadership & contribution:** creative direction, team leadership, stakeholder management, workshop facilitation, mentorship
- **Strategy:** systems thinking, brand strategy & identity, campaign strategy, scalable patterns, documentation, behavioral-change design
- **Design & production:** human-centered design, UX/UI design, product design, visual design, web design & development, gamification, motion & animation, photography, customer journey mapping, usability testing, user interviews, information architecture, interaction design, accessibility, measurement frameworks

LANGUAGES

- **English:** C1 (Advanced proficiency)
- **Dutch:** A1 (Learning)
